

Laboratory Modernization Program

Optimize your efficiency and minimize downtime with the Laboratory Modernization Program from APA.

You operate a state of the art research laboratory that relies on a properly functioning laboratory control system to insure occupant safety, energy efficiency, and airflow management. As the exclusive sales and service representative in New England for Phoenix Controls, we take pride in supporting our customers needs long after the sale is made. APA is proud to introduce our Laboratory Modernization Program to help our customers insure the proper operation of their Phoenix Controls laboratory control system. Designed to protect your investment, the Laboratory Modernization Program can be custom tailored to meet your specific needs.

Laboratory Modernization Program:

- Improves Safety
- Save Energy
- Insures system uptime
- Defines upgrade path for older equipment
- Makes Sense!

How the APA Laboratory Modernization Program works.

APA has over 30 years of experience building and servicing critical laboratory control systems throughout New England. APA's engineering and service team specialize in delivering safe and energy efficient critical environments to their customers.

We understand the challenges of out-of-date systems, equipment access challenges, retrofit designs, installation, tear-out and construction, and we can develop a solution that improves your existing Phoenix Controls system to improve safety, save energy, and insure optimal performance.

The Laboratory Modernization Program is comprised of:

- Lab System Service Contracts
- Lab Retro Commissioning Program
- Lab Energy Optimization Program
- Lab System Upgrade Program
- Lab Technical Training Program

Call today to schedule a presentation on each of these value based programs.
